CONTENTS OF VOLUME 158

NUMBER 1, OCTOBER 1986

Bioluminescent Assay of Creatine Kinase Activity Using Immobilized Firefly Extract
N. N. Ugarova, L. Yu. Brovko, L. V. Ivanova, T. N. Shekhovtsova, and I. F. Dolmanova 1

Assay of Brain Aldehyde Dehydrogenase Activity Using High-Performance Liquid Chromatography with Electrochemical Detection *Olof Tottmar* 6

Automated Thermometric Enzyme Immunoassay of Human Proinsulin Produced by *Escherichia coli* *Staffan Birnbaum, Leif Bülow, Kimber Hardy, Bengt Danielsson, and Klaus Mosbach* 12

A Direct and Sensitive Determination of Histamine in Acid-Deproteinized Biological Samples by High-Performance Liquid Chromatography
Yoshihiro Arakawa and Shinro Tachibana 20

Analysis of Enzymatic Activities of Subcellular and Chromatographic Fractions by an Automated Colorimetric Microassay System
John Ding-E Young, Angela Damiano, Lauren G. Leong, and Zanvil A. Cohn 28

An Enzymatic Method for the Synthesis of [^{14}C]Pyridoxal 5′-Phosphate from [^{14}C]Pyridoxine
Toshiharu Yagi, Masashi Takasugi, Shinpei Yamamoto, and Mitsuhiro Nozaki 36

Separation of Anionic Oligosaccharides by High-Performance Liquid Chromatography
Eric D. Green and Jacques U. Baenziger 42

An Apparatus for Protein Crystal Growth Studies *Marc L. Pusey* 50

Assay for Biotin in the Presence of Dethiobiotin with *Lactobacillus plantarum*
Edward DeMoll and William Shive 55

A Sensitive Bioluminescence Assay for *myo*-Inositol
T. W. Gudermann and T. G. Cooper 59

Measurement of Liver Adenine Nucleotides and *S*-Adenosyl Amino Acids by One-Step High-Performance Liquid Chromatography
Henriette Gourdeau, Robert Lavoie, John H. Grose, and Luc Bélanger 64

Adaptation of a γ-Glutamyl Transpeptidase Assay to Microtiter Plates
Paul M. Silber, A. Jay Gandolfi, and Klaus Brendel 68

Exclusion of Spheres by Agarose Gels during Agarose Gel Electrophoresis: Dependence on the Sphere's Radius and the Gel's Concentration
Philip Serwer and Shirley J. Hayes 72

Analysis of Aspartate and Glutamate in Human Cerebrospinal Fluid by High-Performance Liquid Chromatography with Automated Precolumn Derivatization
David C. Spink, John W. Swann, O. Carter Snead, Robert A. Waniewski, and David L. Martin 79

Protein Crosslinking Reagents Containing a Selenoethylene Linker Are Cleaved by Mild Oxidation *Ole Buchardt, Henrik I. Elsner, Peter E. Nielsen, Lars C. Petersen, and Elisabeth Suenson* 87

Analysis of *S*-Methylmethionine and *S*-Adenosylmethionine in Plant Tissue by a Dansylation, Dual-Isotope Method *Peter K. Macnicol* 93

A Radioenzymatic Assay for Quinolinic Acid
Alan C. Foster, Etsuo Okuno, Daniel S. Brougher, and Robert Schwarcz 98

Specifically Increased Solubility of Enzymes in Polyethyleneglycol Solutions Using Polymer-Bound Triazine Dyes *Göte Johansson and Monica Joelsson* 104
Lead Precipitation: An Aid to Separation of Dermatan and Mucokeratan Sulfates from Glycosaminoglycan Mixtures *Edward A. Johnson and M. S. Paterson* 11
Artifactual Phosphate Binding Due to Impurities in [^{32}P]Orthophosphate *Ralph J. Kessler, Duke A. Vaughn, and Darrell D. Fanestil* 11
Quantitation of Radiation-, Chemical-, or Enzyme-Induced Single Strand Breaks in Nonradioactive DNA by Alkaline Gel Electrophoresis: Application to Pyrimidine Dimers *Steven E. Freeman, Anthony D. Blackett, Denise C. Monteleone, Richard B. Setlow, Betsy M. Sutherland, and John C. Sutherland* 11
A Solid-Phase Assay for the Phosphorylation of Proteins Blotted on Nitrocellulose Membrane Filters *Flavia Valtorta, Werner Schiebler, Reinhard Jahn, Bruno Ceccarelli, and Paul Greengard* 13
Separation and Quantitative Analysis of O-linked Phosphoamino Acids by Isocratic High-Performance Liquid Chromatography of the 9-Fluorenylmethyl Chloroformate Derivatives *Joseph S. Niedbalski and David P. Ringer* 13
High-Performance Liquid Chromatographic Determination of 6-Aminopenicillanic Acid by Postcolumn Alkaline Degradation *Jun Haginaka and Junko Wakai* 14
A [4,5-^{3}H]Lysine:[^{14}C]Lysine Dual-Label Method to Measure Lysine Hydroxylation in Collagen *Mario Chojkier, William Holderman, and John F. Bateman* 15
Analysis of Sialidase and *N*-Acetylneuraminate Pyruvate-Lyase Substrate Specificity by High-Performance Liquid Chromatography *Ashok K. Shukla and Roland Schauer* 15
Use of Sodium Trichloroacetate and Mung Bean Nuclease to Increase Sensitivity and Precision during Transcript Mapping *Michael G. Murray* 16
Ligation of Single-Stranded Oligodeoxyribonucleotides by T4 RNA Ligase *Daniel C. Tessier, Roland Brousseau, and Thierry Vernet* 17
Preparative Ion-Exchange High-Performance Liquid Chromatography of Bacterial Ribosomal Proteins *Malcolm Capel, Dipak Datta, Concepcion R. Nierras, and Gary R. Craven* 179
A Simple Procedure for the Preparation of Pure Kinetoplast DNA Network Free of Nuclear DNA from the Kinetoplast Hemoflagellate *Leishmania donovani* *S. Dasgupta, S. Adhya, and H. K. Majumder* 189
Direct Assay for Phosphotransacetylase and Acetyl-Coenzyme A Carboxylase by High-Performance Liquid Chromatography *Bart De Spiegeleer, Geert Mannens, Guido Slegers, Walter Van den Bossche, and Albert Claeys* 195
Variables in Xanthine Oxidase-Initiated Luminol Chemiluminescence: Implications for Chemiluminescence Measurements in Biological Systems *Jiří Wilhelm and Vladimír Vilím* 201
Subunit-Exchange Chromatography of Self-Associating Proteins: A Quantitative Reappraisal *Emilia Chiancone and Donald J. Winzor* 211
Isolation, Characterization, and Amino-Terminal Amino Acid Sequence Analysis of Human Neutrophil Cathepsin G from Normal Donors *Louis W. Heck, Katherine S. Rostand, Fiona A. Hunter, and Ajit Bhown* 217
An Improved Method for Assay of Cholesterol 7α-Hydroxylase Activity *Tadashi Ogishima and Kyuichiro Okuda* 228
Hydrophobic Adsorption Chromatography to Reduce Nonspecific Staining by Rhodamine-Labeled Antibodies *Edward G. Spack, Jr., Beverly Packard, Marjorie L. Wier, and Michael Edidin* 233

ERRATUM

Volume 154, Number 2, May 1, 1986: Wendy Lewin Fitch, Joseph E. Watson, and Janet C. King, "Measurement of Urinary 3-Methylhistidine with Cationic-Exchange Resin," pp. 632–637 238

NUMBER 2, NOVEMBER 1, 1986

John J. Pisano (1929–1985): Some Personal Recollections
H. M. Fales and W. Lovenberg 239

John J. Pisano (1929–1985): Eulogy *Zenzo Tamura and Terumi Nakajima* 241

Consecutive DNA Terminator Sequencing by Using Enzymatically Generated Primers
Mart Speek, Heini Ilves, and Artur Lind 242

Recovery of Nanogram Quantities of DNA from Plasma and Quantitative Measurement Using Labeling by Nick Translation
Gilbert J. Fournié, Martine Gayral-Taminh, Jean-Pierre Bouché, and Jean J. Conté 250

Wet-Chemical Postcolumn Reaction and Fluorescence Detection Analysis of the Reference Interval of Endogenous Serum Vitamin $K_{1(20)}$
Willy E. Lambert, André P. De Leenheer, and Eddy J. Baert 257

Application of a Nitrocellulose Immunoassay for Quantitation of Proteins Secreted in Culture Media *Frank M. LaDuca, Chi V. Dang, and William R. Bell* 262

Spectrophotometric Determination of Inorganic Phosphate in the Presence of Thiol Compounds
Susumu Yamato, Ikumi Sahara, Hisayoshi Sugihara, and Kenji Shimada 268

Introduction of Deoxyribonucleoside Triphosphates into Intact Cells by Electroporation
J. A. Sokoloski, M. M. Jastreboff, J. R. Bertino, A. C. Sartorelli, and R. Narayanan 272

Radiation Inactivation Probe of Membrane-Bound Enzymes: γ-Glutamyltranspeptidase, Aminopeptidase N, and Sucrase
Bruce R. Stevens, Ellis S. Kempner, and Ernest M. Wright 278

Glycosphingolipid Immunostaining: Detection of Antibody Binding with an Avidin–Biotin Enzyme System *Joanne Buehler and Bruce A. Macher* 283

Extraction of Myosin Light Chains and Actin from Bovine Cardiac Muscle Acetone Powder *Julian A. Barden, Patricia Symons, John A. Cartmill, Masao Miki, and Brett D. Hambly* 288

Low-Cost Two-Dimensional Gel Densitometry
Richard M. Levenson, Edward V. Maytin, and Donald A. Young 294

Analysis of α-Fetoprotein Heterogeneity by an Improved Crossed Immunoaffinoelectrophoretic Technique
Ernest A. Albanese, Bonita L. Bachl, and Gabriel M. Mulcahy 302

T4 Polynucleotide Kinase: Macromolecular Crowding Increases the Efficiency of Reaction at DNA Termini *Barbara Harrison and Steven B. Zimmerman* 307

Determination of Stereochemistry in the Fatty Acid Hydroperoxide Products of Lipoxygenase Catalysis *Jon C. Andre and Max O. Funk* 316

Properties of Radiolabeled Type I, II, and III Collagens Related to Their Use as Substrates in Collagenase Assays
Kasim A. Mookhtiar, Satish K. Mallya, and Harold E. Van Wart 322

Accurate, Quantitative Assays for the Hydrolysis of Soluble Type I, II, and III ^{3}H-Acetylated Collagens by Bacterial and Tissue Collagenases
Satish K. Mallya, Kasim A. Mookhtiar, and Harold E. Van Wart 334

Measurement of Free and Esterified Carnitine in Tissue Extracts by High-Performance Liquid Chromatography
Naoshi Takeyama, Daisuke Takagi, Kazuya Adachi, and Takaya Tanaka 346
Identification and Isolation of Vitamin K-Dependent Proteins by HPLC
Robert D. Litwiller, Richard J. Jenny, and Kenneth G. Mann 355
Growing Calmodulin Crystals for X-Ray Diffraction Studies at Room Temperature in 2 Days *Ann M. Barford, Gary L. Gilliland, and Douglas W. Morgan* 361
Renaturation of Dextranase Activity from Culture Supernatant Fluids of *Streptococcus sobrinus* after Sodium Dodecylsulfate Polyacrylamide Gel Electrophoresis
John F. Barrett and Roy Curtiss III 365
In Situ Autoradiographic Detection of Folylpolyglutamate Synthetase Activity
Daniel J. Sussman, Gregory Milman, Charles Osborne, and Barry Shane 371
Isolation of Cationic Peptides from Rat Polymorphonuclear Leukocyte Granule Contents Using Fast Protein Liquid Chromatography
Michael J. Loeffelholz and Malcolm C. Modrzakowski 377
Affinity Precipitation of Lactate Dehydrogenase with a Triazine Dye Derivative: Selective Precipitation of Rabbit Muscle Lactate Dehydrogenase with a Procion Blue H-B Analog *James C. Pearson, Steven J. Burton, and Christopher R. Lowe* 382
Fluorographic Detection of Tritiated Glycopeptides and Oligosaccharides Separated on Polyacrylamide Gels: Analysis of Glycans from *Dictyostelium discoideum* Glycoproteins *O. Prem Das and Ellen J. Henderson* 390
Purification of Hormone-Sensitive Lipase by High-Performance Ion Exchange Chromatography *Staffan Nilsson and Per Belfrage* 399
The Chemical Synthesis of High Specific-Activity [^{35}S]Adenosylhomocysteine
Peter H. Stern and Robert M. Hoffman 408
The Influence of Radioiodination on the Adsorption of IgG and Serum Albumin to Polystyrene *J. Walsh and J. P. Gosling* 413
Histone Separation by High-Performance Liquid Chromatography on C_4 Reverse-Phase Columns *Herbert Lindner, Wilfried Helliger, and Bernd Puschendorf* 424
Mapping of Radiolabeled Peptides Derived from Proteolysis of Polypeptides Bound to Nitrocellulose after "Western" Blotting
Elizabeth A. Carrey and D. Grahame Hardie 431
A Protein Binding Assay for Hyaluronate *Brian E. Lacy and Charles B. Underhill* 436
Spectrophotometric Determination of Tryptophan and Tyrosine in Peptides and Proteins Based on New Color Reactions *J. Chrastil* 443
Separation of Phosphoinositides and Other Phospholipids by Two-Dimensional Thin-Layer Chromatography
Kathleen T. Mitchell, James E. Ferrell, Jr., and Wray H. Huestis 447
A Fluorometric Method for the Determination of Functional (Na,K)-ATPase and Cardiac Glycoside Receptors *P. A. George Fortes* 454
Sequential Volume Changes on a Small Sample by Density *Donald W. Kupke* 463
AUTHOR INDEX FOR VOLUME 158 469

The Subject Index for Volume 158 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification methods for enzymes and other proteins which contain a major novel aspect and in which a high level of purity is achieved. Acceptance for publication is based on the contribution made toward protein purification and not on the successful purification of a specific protein.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel*, *rapid*, *improved*, *simple*, *sensitive*, *efficient*, *convenient*, *new*. Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible.

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Martin, S. C., and Ekman, P. (1986) *Anal. Biochem.* **154,** 395–399.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Zoller, M. J., and Smith, M. (1983) *in* Methods in Enzymology (Wu, R., Grossman, L., and Moldave, K., eds.), Vol. 100, Part B, pp. 468–500, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
